INTRODUCING...

Dial Regulators

Pneumatic Division North America is pleased to introduce the new Dial Regulators to compliment our wide range of air preparation units.

Dial Regulators are available in four body sizes with port offerings ranging from ¼" through 2". These regulators feature a transparent, pressure-calibrated, non-rising adjustment dial for quick adjustment of secondary pressure. Traditional gauges are not required for this regulator. Pressure ranges can be dialed in less than 270° of the dial rotation. This feature is particularly advantageous if the secondary pressure must be changed frequently. Gauge ports are included but are usually used for additional outlet ports.

Some other features to the Dial Regulators include:

- Balanced poppet/valve design
- High relief capacity
- Two ¼" gauge ports – can be used as additional secondary ports
- High flow
- Non-rising pressure indicating dial face

This exciting new FRL offering gives you more tools in your arsenal to attack Norgren, SMC and others. With the highest quality products and competitive pricing, these will be fun products to sell.

Good selling!

Sincerely,

Lee Scott

Product Sales Manager
